CONTENTS OF VOLUME 134

NUMBER 1, OCTOBER 1, 1983

Review: Diadenosine 5',5'''-P ¹ ,P ⁴ -Tetraphosphate (Ap ₄ A): Its Role in Cellular Metabolism	<i>Paul Zamecnik</i>	1
An Enzymatic Method for Inosine 5'-Monophosphate in the Femtomole Range	<i>Douglas A. Young, Joyce A. Carter, Maggie M.-Y. Chi, and Oliver H. Lowry</i>	11
A Single-Tube Radioimmunoassay for the Antiviral Agent 2,6-Daimino-9-(2-hydroxy-ethoxymethyl)purine (A134U)	<i>R. P. Quinn, S. S. Good, Leroy Gerald, and Julie J. Sabatka</i>	16
Characterization of a Fluorescence Assay to Monitor Changes in the Aqueous Volume of Lipid Vesicles	<i>Debra A. Kendall and Robert C. MacDonald</i>	26
Automated Analysis of Uronic Acids by High-Performance Liquid Chromatography with Photometric and Fluorimetric Postcolumn Labeling Using 2-Cyanoacetamide	<i>Susumu Honda, Shigeo Suzuki, Masaye Takahashi, Kazuaki Kakehi, and Shigetake Ganno</i>	34
An Agarose Gel Resolving a Wide Range of DNA Fragment Lengths	<i>E. Boncinelli, A. Simeone, A. De Falco, V. Fidanza, and A. La Volpe</i>	40
Automated Assay of Creatinine in Serum as Simplified by the Use of Immobilized Enzymes, Creatinine Deiminase and Glutamate Dehydrogenase	<i>Masayoshi Tabata, Takahiro Kido, Masayuki Totani, and Takashi Murachi</i>	44
3-Aminopyridine 1,N ⁶ -Ethenoadenine Dinucleotide Phosphate: A Fluorescent Reagent for NADP-Requiring Enzymes	<i>Bruce M. Anderson and Constance D. Anderson</i>	50
A Versatile Microfiltration Device	<i>Sigurd Lenzen and Uwe Panten</i>	56
High-Performance Liquid Affinity Chromatography on Silica-Bound Alcohol Dehydrogenase	<i>Kurt Nilsson and Per-Olof Larsson</i>	60
Single-Cell Partition Analysis—A Direct Fluorescence Technique for Examining Ligand-Macromolecule Interactions	<i>David E. Graves and Thomas R. Krugh</i>	73
A Colony Filter-Hybridization Procedure for the Filamentous Fungus <i>Neurospora crassa</i>	<i>Lori L. Stohl and Alan M. Lambowitz</i>	82
Rocket and Crossed Immunoelectrophoresis of Proteins Solubilized with Sodium Dodecyl Sulfate	<i>F. Gerald Plumley and Gregory W. Schmidt</i>	86
Multiple Forms of Amylase in Leaf Extracts: Electrophoretic Transfer of the Enzyme Forms into Amylose-Containing Polyacrylamide Gels	<i>Martin Steup and Klaus-Peter Gerbling</i>	96
Assay of Mono ADP-Ribosyltransferase Activity by Using Guanlylhydrazones	<i>Gopalan Soman, Kenneth B. Tomer, and Donald J. Graves</i>	101
Detection of Picomole Levels of Hydroperoxides Using a Fluorescent Dichlorofluorescein Assay	<i>Richard Cathcart, Elizabeth Schwiers, and Bruce N. Ames</i>	111
Separation of Hemoglobin Types by Cation-Exchange High-Performance Liquid Chromatography	<i>Shri P. Gupta and Samir M. Hanash</i>	117
Pantothenase-Based Assay of Pantothenic Acid	<i>R. Kalervo Airas</i>	122
Polyacrylamide Gels Which Contain a Novel Mixed Disulfide Compound Can Be Used to Detect Enzymes That Catalyze Thiol-Producing Reactions	<i>Robert B. Harris and I. B. Wilson</i>	126

A Radiotechnique Suitable for the Detection of Octopine Synthesis in Crown-Gall Tissues Grown <i>in Vitro</i>	M. Maille	133
The Effect of Sample Composition and Vial Type on Čerenkov Counting in a Liquid Scintillation Counter	Thomas F. Kellogg	137
Purification of Aqueous Ethylene Glycol	Michael W. Washabaugh and Kim D. Collins	144
Microanalysis of Free and Conjugated Bile Acids by Thin-Layer Chromatography and <i>in Situ</i> Spectrofluorimetry	Abraham Van Den Ende, Caroline E. Rădecker, and Willem M. Mairuhu	153
The High-Performance Liquid Chromatographic Analysis of Diastereomers and Structural Analogs of Angiotensins I and II	Sam A. Margolis and Pamela L. Konash	163
Degradation Study of Catecholamines, Indole Amines and Some of Their Metabolites in Different Extraction Media by Chromatography and Electrochemical Detection	N. Verbiese-Genard, M. Hanocq, C. Alvoet, and L. Molle	170
Filter-Binding Assay Procedure for Thyroid Hormone Receptors	Akira Inoue, Junichi Yamakawa, Munehiko Yukioka, and Seiji Morisawa	176
A Silver Stain for the Detection of Nanogram Amounts of tRNA following Two-Dimensional Electrophoresis	Gabor L. Igloi	184
Comparison of Three Variations of the Radioallergosorbent Test-Inhibition Assay for Measuring Allergenic Activity of Grass Pollen Extracts	Rüdiger Wahl, Hans Jörg Maasch, and Wolfgang Geissler	189
A Polarographic Method for the Simultaneous Determination of Total Glucosinolates and Free Glucose of Cruciferous Material	Renato Iori, Onofrio Leoni, and Sandro Palmieri	195
Size Fractionation of Thermal Aggregates of Immunoglobulin G ^{1,2}	Irwin Oreskes and David Mandel	199
Purification and Separation of Tomato Isoelectins by Chromatofocusing	David C. Kilpatrick, James Weston, and Stanislaw J. Urbaniak	205
Purification and Fluorometric Assay of Proteinase A from Yeast	Hideyoshi Yokosawa, Hiroshi Ito, Shigeki Murata, and Shin-ichi Ishii	210
Improved Liquid Chromatographic Determination of Serum Cortisol with Double Internal Standardization Compared to Radioimmunoassay and Fluorometry, and Evaluated by Isotope Dilution/Mass Spectrometry	Willy E. Lambert, Jean-Paul M. De Slypere, Joseph A. Jonckheere, Alex Vermeulen, and André P. De Leenheer	216
Selective Isolation of Tryptophan-Containing Peptides by Hydrophobicity Modulation	Tatsuru Sasagawa, Koiti Titani, and Kenneth A. Walsh	224
Silver Staining of Proteins in Polyacrylamide Gels: Increased Sensitivity by a Blue Toning	Guy Berson	230
Aerobic Ferrisiderophore Reductase Assay and Activity Stain for Native Polyacrylamide Gels	Mark D. Moody and Harry A. Dailey	235
Quantitative Determination of Individual Glycosaminoglycans in Plasma by Concanavalin A Rocket Electrophoresis	I. Staprans, J. M. Felts, and R. J. Butts	240
Electrophoresis of Opioid Peptides on Columns with Agarose Suspension	Fred Nyberg and Lars Terenius	245
A Four- to Sixfold Enhancement in Sensitivity for Detecting Trace Proteins in Dye or Silver Stained Polyacrylamide Gels	Giuseppe Palumbo and Mario F. Tecce	254
Preparative Affinity Electrophoresis: Application to Human Erythrocyte Carbonic Anhydrase	Nils Bergenhem, Uno Carlsson, and Christian Hansson	259

Transfer of Small Plasmid DNA Fragments from Polyacrylamide Gels onto Nitrocellulose Paper	<i>Philippe Frossard, Kenneth L. Sisco, and Donald L. Rucknagel</i>	265
Comparisons Using ^{35}S - and ^{32}P -Labeled DNA for Hybridization on Nitrocellulose Filters	<i>Anthony J. Radford</i>	269
Comparison of Three Methods for Measuring Locations of Long Range Base Pairing in Single-Stranded DNA by Electron Microscopy	<i>Paul L. McCormack, Thomas D. Edlind, and Garret M. Ihler</i>	272
An Apparatus for the Simultaneous Casting of Large Numbers of Uniform Cylindrical Polyacrylamide Gels	<i>James P. Alligood</i>	284
The Simultaneous Extraction of High-Molecular-Weight DNA and of RNA from Solid Tumors	<i>Peter Krieg, Eberhard Amtmann, and Gerhard Sauer</i>	288
Quantitative Determination of Overlapped Proteins in Sodium Dodecyl Sulfate-Polyacrylamide Gel Electrophoresis	<i>Yasuhiro Kitazoe, Masanobu Miyahara, Nobuaki Hiraoka, Hisashi Ueta, and Kozo Utsumi</i>	295
Ion-Pair Extraction of Bile Acids with Lipidex Gel	<i>Arne Dyfverman and Jan Sjövall</i>	303
A Method Combining Solvent and Gel Extraction for Isolation and Preliminary Purification of Steroids in Tissues	<i>Stig H. G. Andersson and Jan Sjövall</i>	309
High Sensitivity Method for Fluorofore Detection in Gradient Polyacrylamide Slab Gels through Excitation by Laser Light: Application to Glycoproteins Stained with Concanavalin A-Fluorescein Isothiocyanate	<i>Roberto Cotrufo, Maria Rosaria Monsurrò, Giuseppe Delfino, and Giuseppe Geraci</i>	313
Comparison of Two Methods of High-Molecular-Weight DNA Isolation from Human Leucocytes	<i>Chantal Gautreau, Cécile Rahuel, Jean-Pierre Cartron, and Gérard Lucotte</i>	320
Radioisotopic Assay of Picomolar Amounts of Coenzyme A	<i>Daniel Rabier, Pascale Briand, Françoise Petit, Pierre Kamoun, and Liliane Cathelineau</i>	325
Use of Cation-Selective Electrodes in Enzyme Assays	<i>A. A. Baykov and E. B. Kostenko</i>	330
Purification of Single-Chain Human Low-Molecular-Weight Kininogen and Demonstration of Its Cleavage by Human Urinary Kallikrein	<i>Manfred Maier, K. Frank Austen, and Jocelyn Spragg</i>	336
Use of Endoproteinase Lys-C from <i>Lysobacter enzymogenes</i> in Protein Sequence Analysis	<i>Peter A. Jekel, Wicher J. Weijer, and Jaap J. Beintema</i>	347
A Specific High-Performance Liquid Chromatography Assay for Dehydroascorbic Acid Shows an Increased Content in CLL Lymphocytes	<i>Charles M. Farber, Steven Kanengiser, Robert Stahl, Leonard Liebes, and Robert Silber</i>	355
Recovery of Proteins on a Milligram Scale from Polyacrylamide Electrophoresis Gels, Exemplified by Purification of a Retinol-Binding Protein	<i>Lars-Göran Öfverstedt, Johan Sundelin, and Gunnar Johansson</i>	361
Poly(Ethylene Glycol) Quantitation by Laser Nephelometry	<i>Scott C. Cole, Gary A. Christensen, and W. P. Olson</i>	368
Gel Filtration Chromatography of Triple-Helical Calf Skin Collagen	<i>Milton E. Noelken and Bryce D. Bettin</i>	374
Diadenosine 5',5'''- P^1 , P^3 -Triphosphate in Eukaryotic Cells: Identification and Quantitation	<i>Adalind Ogilvie and Peter Jakob</i>	382

A Rapid Method for the Determination of Naringin, Prunin, and Naringenin Applied to the Assay of Naringinase	<i>Konrad Habelt and Fritz Pittner</i>	393
Chromatography of Permethylated Oligosaccharide Alditols	<i>Wei-Tong Wang, Fumito Matsuura, and Charles C. Sweeley</i>	398
Measurement of Rate Constants for Actin Filament Elongation in Solution	<i>Thomas D. Pollard</i>	406
Enzymatic Determination of Subpicomole Quantities of Phospho-L-Arginine in Nerve Cytoplasm	<i>Edward M. Lieberman</i>	413
Measurement of Steady State Protein Degradation in Cultured Human Muscle Cells	<i>Hans E. Neville, Margaret C. Neville, Sharon Harrold, and Robert Farrell</i>	424
A Method for the Synthesis of D-3-Phospho[U- ¹⁴ C]glycerate	<i>William K. Kappel</i>	439
Size Fractionation of Anionic Oligosaccharides and Glycopeptides by High-Performance Liquid Chromatography	<i>Scott J. Mellis and Jacques U. Baenziger</i>	442
Chromatographic Analysis of Vinca Alkaloids in Human Neoplastic Tissues and Host (Mouse) Tissues after Injection <i>in Vivo</i> or after Incubation <i>in Vitro</i>	<i>Janet A. Houghton, Pamela M. Torrance, and Peter J. Houghton</i>	450
Presence of Cytidine 5'-Tetraphosphate in Commercial Samples of Cytidine 5'-Triphosphate	<i>María J. Costas, José C. Cameselle, María A. Günther Sillero, and Antonio Sillero</i>	455
A Radioisotopic-Exchange Method for Quantitation of Short-Chain (Acid-Soluble) Acylcarnitines	<i>J. Kerner and L. L. Bieber</i>	459
A Simple Method to Purify Ribonucleotide Reductase	<i>Thomas Spector and Devron R. Averett</i>	467
A Quantitative Determination of the Relative Amount of Histones in Polyacrylamide Gel by Silver Stain	<i>Shinkichi Irie and Mariko Sezaki</i>	471
Fractionation with Ethanol of Nucleic Acids from Viroid-Infected Plants	<i>Antonio Granell, Ricardo Flores, and Vicente Conejero</i>	479
Automated Analysis of Hexosamines by High-Performance Liquid Chromatography with Photometric and Fluorimetric Postcolumn Labeling Using 2-Cyanoacetamide	<i>Susumu Honda, Tadao Konishi, Shigeo Suzuki, Masaye Takahashi, Kazuaki Kakehi, and Shigetake Ganno</i>	483
An Ultraviolet Spectrophotometric Assay for Aspartate Transcarbamylase	<i>Jefferson Foote</i>	489
A Direct Radioassay for Pyruvate Kinase Activity	<i>Harvey R. Kaslow and Cort R. Garrison</i>	495
A Simple Spectrophotometric Determination of Formaldehyde and Other Aldehydes: Application to Periodate-Oxidized Glycol Systems	<i>Gad Avigad</i>	499
Utilization of Conical Equilibrium Dialysis Cells to Shorten Equilibration Time	<i>Alexander Cheng and Gerald M. Carlson</i>	505
Isolation of Intact Polysomes from Mechanically Dehulled Developing Grain	<i>Kenneth Garson, Gregory J. Matlashewski, Khosrow Adeli, Laurian S. Robert, and Illimar Altosaar</i>	512
AUTHOR INDEX FOR VOLUME 134		517

The Subject Index for Volume 134 will appear in the December 1983 issue as part of a cumulative index for the year 1983.

INFORMATION FOR AUTHORS¹

Analytical Biochemistry is an international journal that will publish original articles on methods of interest to the biochemical sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

- Cell and tissue culture techniques that are of general application.
- Sequencing and synthesis of nucleic acids; chemical mutagenesis.
- Purification methods for enzymes and other proteins when a high level of purity has been achieved.
- Immunochemical techniques, both analytical and preparative, if they are of general applicability by biochemists. Included are radioimmunoassays, but only if a unique approach is introduced rather than the determination of a substance not previously assayable.
- Pharmacological and toxicological research techniques that have a biochemical approach.
- Review articles dealing with timely topics. Although these are generally invited, unsolicited manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in quadruplicate to *Analytical Biochemistry*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101. In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal now requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about 8½ × 11 inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 35 letters and spaces), an abstract (50–150 words), and the address to which proof should be mailed. In creating a title for your paper, please omit words such as *novel*, *rapid*, *improved*, *simple*, *sensitive*, *efficient*, *convenient*, *new*. Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. For example, what *kind* of method are you describing? **Authors should indicate the following on the title page:** (1) **the appropriate subject category for listing in the Table of Contents;** (2) **six descriptive key words for computer-aided selection of reviewers.** (Please see the Appendix at the end of the extended Instructions to Authors published in the July 1, 1983 issue for a list of recommended key words.) These words will also be used in the preparation of the annual cumulative subject index for the journal. Please number all pages of the manuscript.

Text. The suggested organization of an article is: abstract; introductory statement; materials and general methods; results; discussion; acknowledgment; references. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept short papers of approximately two printed pages that are arranged without specific sections except for a short abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC–IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the extended Information for Authors, appearing in the July 15, 1981 issue of this journal.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

¹ An extended Information for Authors was published in the July 1, 1983 issue. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC–IUB rules and recommendations, and accepted abbreviations.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text; each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for the engraver. A convenient size for drawings is $8\frac{1}{2} \times 11$ inches (21×27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final engraving should be inked in black. Glossy prints properly prepared are acceptable.

Photographs must be kept to a minimum and should be glossy prints with strong contrasts; the magnification should be indicated by a scale where possible.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. All tables should have descriptive headings, typed (double-spaced) above the table.

Footnotes should be designated in text by superscript numbers and listed on a separate sheet; in tables, by superscript letters and placed at the bottom of the page containing the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in *Chemical Abstracts Service Source Index*, 1980. Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Jones, J. B., Dilworth, G. L., and Stadtman, T. C. (1979) *Arch. Biochem. Biophys.* **125**, 255–260.
2. Metzler, D. E. (1977) *Biochemistry: The Chemical Reaction of Living Cells*, p. 298, Academic Press, New York.
3. Harrington, W. F. (1979) in *The Proteins* (Neurath, H., and Hill, R. L., eds), Vol. 4, pp. 246–409, Academic Press, New York.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.
